EDUCATION

K.J. Somaiya College of Engineering, Mumbai
B.Tech in Information Technology *CGPA: 9.2/10*

May 2026

EXPERIENCE

Technical Consultant Intern *ACI Worldwide, Mumbai*

Jan 2026 – Present

- Performed Development and Unit Testing for Card Update Service through IVRS via UPF for Indian Bank working on the ACI UPF-based solution integrating DCMS decryption, IVRS, and BASE24 Switch; implemented Card Inquiry and Card Update message flows with security and sensitive data masking considerations.
- Conducted IBM MQ POC on Linux set up and configured Queue Manager, TCP Listener, Server/Client-connection channels, local and staging queues with persistence and depth controls, and channel authentication rules, validating end-to-end message routing for the UPF messaging infrastructure.
- Authored SSD for WhatsApp Nudge feature for Debit Card Decline Transactions via UPF for SBI defining the end-to-end solution architecture, BASE24 ISO 8583 message specifications, WhatsApp message flow specifications, CSM descriptions, GAP analysis, and implementation considerations for ACI's UPF platform.
- Designed & authored OpenAPI (YAML) specification and API documentation for UPF In-App ATM Complaint Management System for SBI covering Transaction Inquiry, Complaint Registration, and Complaint Tracking APIs with full request/response schemas, HTTP headers, field-level validations, and error response codes, enabling seamless integration between the MVS mobile channel and UPF middleware.

Software Engineer Intern *Home First Finance Company, Mumbai*

Jun 2025 – Aug 2025

- Engineered an end-to-end loan origination workflow, covering lead capture, application processing, document verification, underwriting, disbursement, and closure for scalable financial operations.
- Developed Salesforce-native dashboards and modular components, providing real-time visibility into loan lifecycle status and operational metrics while improving system maintainability and reliability.

PROJECTS

Sentinel AI *Python, Flask, Node, React, TensorFlow, SDN, Ryu, Linux*

[Link](#)

- Designed and built an AI-driven real-time DDoS detection system for 5G networks, leveraging ensemble ML models, achieving sub-50ms inference latency and automated threat classification.
- Implemented SDN-based autonomous mitigation pipeline to dynamically insert flow rules for IP quarantine, enabling real-time attack containment under simulated multi-vector load conditions.

Knowledge Hubs *Angular, FastAPI, Neo4j, GraphRAG, Vector Embeddings*

[Link](#)

- Built a full-stack GraphRAG platform that transforms unstructured documents into searchable knowledge graphs using LLMs, vector embeddings, and semantic retrieval.
- Engineered a scalable AI pipeline with FastAPI and Neo4j for knowledge extraction, graph-based retrieval, cross-document linking, and citation-grounded question answering.

Peachy Shop *Java, Spring Boot, Maven, React, SQL, Docker, Redis*

[Link](#)

- Architected and built a scalable full-stack e-commerce system with stateless dual-token authentication, role-based access control, 20+ APIs, pagination, optimistic locking, and secure credential handling.
- Designed a high-performance, concurrency-safe data layer, achieving sub-100ms cached responses, reducing database load, and supporting 100+ concurrent users with resilient fallback mechanisms.

SKILLS

Languages: Java, Python, JavaScript, Typescript, HTML/CSS, SQL

Frameworks/Libraries: React, Next.js, Node.js, Flask, FastAPI, Spring Boot, TensorFlow, JUnit

Tools & Platforms: Git, Docker, Kubernetes, Jenkins, Maven, Linux, Redis, GCP

Databases: MySQL, PostgreSQL, MongoDB, Neo4j
